

Exercise 4: Project Stakeholders

Stakeholder	Role	Interests / Expectations	Influence on System	How System Affects Stakeholder
Pharmacy Owner	Project sponsor and administrator	Efficient operations, increased online sales, control, accurate information	Very High: determines major business requirements and approves functionality	Provides greater visibility and control over products, employees, orders, and online operations
Pharmacists	Prescription reviewers and pharmacy professionals	Correct prescription workflow, efficient order processing, easy-to-use interface	High: defines how prescription review should operate	Reduces manual work and centralizes prescription/order processing
Pharmacy Staff	Operational system users	Fast order handling, inventory accuracy, simple workflow	High: their feedback affects operational functionality	Helps staff organize orders, inventory, and customer requests
Customers	Primary external users	Easy shopping, clear medicine information, simple prescription upload, secure checkout and order tracking	High: system usability and features are primarily designed around customer needs	Gives customers remote access to pharmacy products and ordering
System Administrator / Development Team	Development and technical maintenance	Reliable architecture, security, maintainability, and understandable requirements	High during development	Responsible for building, fixing, and maintaining the system

Payment Service	External service/system	Correct and secure payment requests	Medium: payment interface constrains checkout implementation	Receives and processes payment requests generated by the system
Delivery Service / Delivery Staff	Handles order delivery	Accurate delivery information and order status	Medium	Receives finalized orders that must be delivered to customers
Pharmacy Management	Supervises operations	Accurate reports, efficient processes, visibility over performance	High	Gains centralized information about system operations
Medicine/Product Suppliers	Supply pharmacy inventory	Accurate stock requirements	Low in initial version	May indirectly benefit from more organized stock information

Our likely actors will therefore be:

1. **Customer**
2. **Pharmacy Staff**
3. **Pharmacist**
4. **Owner/Admin**
5. **Payment Gateway**
6. **Delivery Service**
